

Period 2

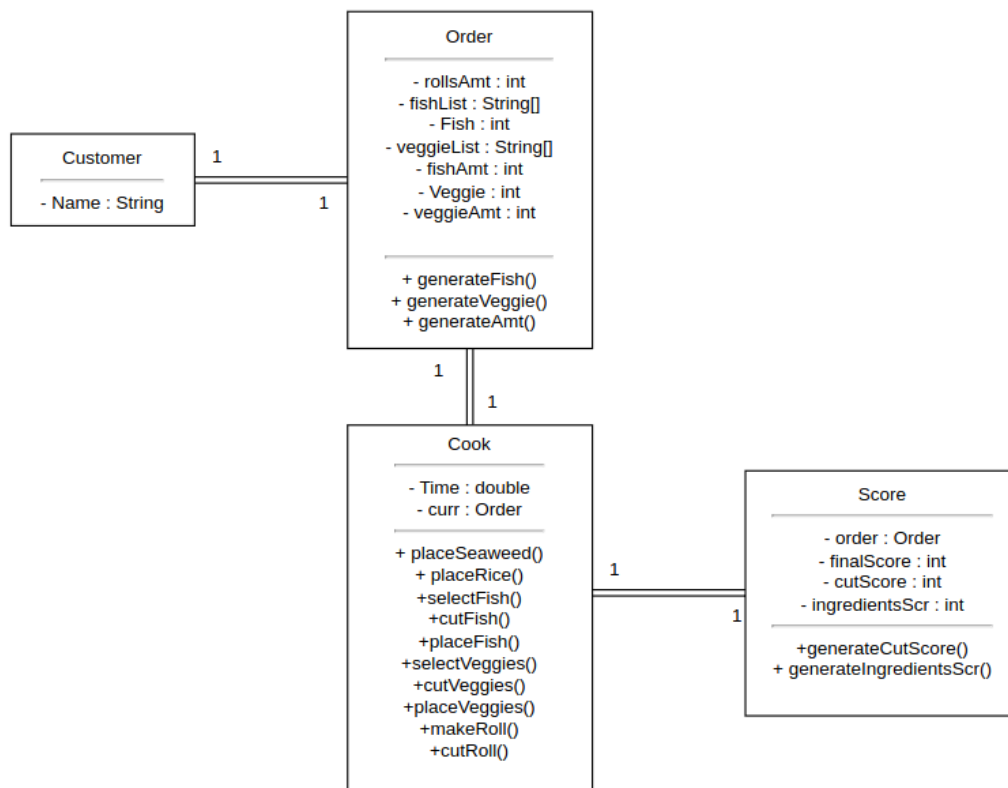

Johanna, Rose, Stella

JRS

Jrs. Sushiria

Our project is a game where customers place sushi orders and the player has to make them. Then the player gets stars based on the accuracy of the order.

UML:

How to play:

The user will receive a randomized order from a customer and then will have to put together the ordered sushi roll. The

player will then have to select the right ingredients and cut and place them in the sushi roll in some amount of time. Then they have to roll and cut the sushi. The player will receive a score based on the accuracy of the ingredients and the precision of the cuts.
